Aqua 45 is a low-traffic entrance matting that offers good dirt-removal properties due to its thick fibres, and good absorbency due to the fine fibres, to minimise moisture. It has a curl-patterned double-fibre weave, made of thin polypropylene (80%) fibres with good absorbency and thick polyamide 6 (20%) fibres with a striped pattern, bonded to a nonwoven structure with a polyester and polyamide weave. The non-slip backing of Aqua 45 is made of durable, phthalate-free PVC for optimal protection of floor coverings from dirt. The strong phthalate-free PVC edges are designed to allow safe passage.
